Immunotherapy for Infectious Diseases Conference

NOVEL WAYS TO FIGHT PATHOGENS

March 29 to April 1, 2020
Hotel La Palma, Stresa - Lake Maggiore, Italy

cconference2020@unipv.it

The "Immunotherapy for Infectious Diseases Conference" brings together academia, small biotech, big pharma and regulatory bodies invested in the discovery of novel therapeutic strategies.

Infectious diseases remain a leading cause of morbidity and mortality worldwide necessitating novel and innovative therapeutics. Current and future challenges range from neglected diseases affecting the poorest countries to antimicrobial resistant pathogens in modern hospitals; from rare but deadly infections affecting few to the threat of potential global pandemics; from pathogens reaching new geographical areas due to climate changes to disease reemerging due to lack of vaccination coverage.

The ability of the human immune system to fight pathogens can be exploited for effective therapeutic strategies. Recombinant and further engineered antibodies can be used as active ingredients, as targeting agents to selectively deliver drugs or to establish novel vaccination strategies. Bringing a novel therapy to the patients requires the combined effort of several players, all of which are brought together in the "Immunotherapy for Infectious Diseases Conference", with world high caliber speakers and participants.

The congress is organized in the USA and Europe in alternating years with the aim to serve as a forum to exchange ideas and foster cross-disciplinary collaborations.

CONFERENCE HIGHLIGHTS
- Keynote seminars from high caliber international experts from academia, industry and regulatory bodies (EMA, FDA, EU)
- Presentations on novel therapeutic techniques for immunotherapy
- Poster sessions to promote novel approaches and young investigators

Confirmed KEYNOTE SPEAKERS
- Prof. Antonio Lanzavecchia
- Dr Davide Corti, Humabs

SESSION TOPICS
- Antibody-based drug development
- Nanomedicine against infectious diseases
- Immunotherapy against viral infections
- Immunotherapy against bacterial infections
- Immunotherapy against emerging infectious diseases
- Production and regulatory challenges
- 3Rs principles and infectious diseases
